

“partnered with MEDCO’s safety team to require a focus on safety”

Baylor All Saints Women’s Center

Location: Fort Worth, Texas
 Builder: MEDCO Construction
 Architect: Page Southerland Page
 BT Supervisor: David Couch
 BT Project Manager: Jesse Shaw
 Scope: Drywall, metal framing, acoustical ceilings, insulation and EIFS.

BakerTriangle has worked on many new and remodel hospital projects, and with the Baylor All Saints Women’s Center we had both conditions at once. The new Women’s Center is located next to the Baylor All Saints Medical Center and required our mechanics to maintain established working hours for exterior and interior work.

This hospital is designed and built especially for the care of women. BT has many years of experience working on health care projects and this experience was very beneficial for the execution of the architect’s specific design in the delivery rooms and patient rooms.

Once again BT used single source supervision to organize and staff the drywall and plaster trades. As always, BT’s safety team scheduled on-site safety inspections and had weekly tool box safety talks and partnered with MEDCO’s safety team to require a focus on safety.
