

George W. Bush Presidential Center

Location:	Dallas, Texas
Builder:	Manhattan Construction
Architect:	Robert A. M. Stern Architects
BT PM:	Matthew Clark
BT Estimator:	C. Gabel
Scope:	BASWaphon acoustical plaster, gypsum plaster and stucco soffits.

The George W. Bush Library and Museum is located on the Southern Methodist University campus in Dallas. The 14,000 square foot museum has a full-sized Oval Office, Texas Rose Garden, and many other exhibits that reflect events that happened during President Bush's administration. The architects utilized over 11,000 square feet of USG Veneer Gypsum Plaster and 22,000 square feet of BASWaphon acoustical plaster throughout the library and museum. The BASWaphon acoustical plaster system is relatively new and interfacing with other systems presented a few challenges.

The greatest challenge we faced would be creating the Presidential Seal in the oval office ceiling. Through many hours in meetings a great effort from the design and construction team, we were able to overcome and produce a high quality building that will become a part of history.

“The BASWaphon acoustical plaster system is relatively new and interfacing with other systems presented a few challenges.”
