

Cook Children's Medical Center

Location:	Fort Worth, Texas
Builder:	Linbeck Construction
Architect:	FKP Architects
BT PM:	Bryan Baker
BT Estimator:	Rex Van Natta
Scope:	Metal framing, GFRC column covers and cornice, drywall, EIFS, acoustical, acoustical wall panels and lead lined walls.

The North Bed Tower and Medical Office Building were designed to consolidate all ambulatory care programs for the medical center. The five story facility is made up of a 290,000 square feet inpatient tower and a 250,000 square feet medical office building. The bed tower contains 158 beds for pediatric patient care.

BakerTriangle used its extensive experience with medical facilities to complete this beautiful project designed with a child's happiness in mind. Light coves, column covers and cornices help bring interesting features into a space that receives bright and bold finishes. Intricate details were a challenge in the food court, dining room and main lobby areas.

“The bed tower contains 158 beds for pediatric patient care.”
